PEPFAR's Contribution to the Control of the Epidemic in Mozambique

Even with the challenges imposed by COVID-19, PEPFAR has managed to contribute significantly to the response to HIV/AIDS in Mozambique. These are some of the indicators that measure the efforts made for HIV prevention and treatment between January and March 2022.

PREVENTION

Number of HIV tests performed during the quarter

2,299,678

Number of men circumcised during the quarter

41,454

Number of people who received a positive HIV test result during the quarter

82,306

Number of people who received oral pre-exposure prophylaxis (PrEP) to prevent HIV during the quarter

19,490

TREATMENT

Number of pregnant women who received treatment to prevent mother-to-child transmission of HIV during the trimester

23,620

Cumulative number of people living with HIV who are on antiretroviral treatment by the end of the quarter

1,727,738

Total number of people living with HIV who started antiretroviral treatment during the quarter

78,865

% of patients on antiretroviral treatment who received viral load test with result suppressed during the quarter

93%

In Mozambique, PEPFAR implementation is coordinated by a U.S. government team comprised of the Department of State, United State Agency for International Development (USAID), Centers for Disease Control and Prevention (CDC), Department of Defense and Peace Corps.
